

Tiering and Signals **One** Pager.

REVOPS / UPDATED 2026-05-20

01 THE TIERING SYSTEM

How accounts get a tier

Inverted convention. Tier 1 = highest priority (white-glove). Tier 5 = lowest (nurture). Every active ICP record is scored by `compute_tier()` as a function of **(customer_segment, company_sub_segment)** from a 30-row defaults table, then nudged up or down by signal modifiers. `hs_is_target_account = true` freezes the tier (segment, sub-segment, and enriched-field writes still proceed).

CUSTOMER SEGMENT	SUB-SEG COUNT	SUB-SEGMENTS (HUBSPOT INTERNAL VALUE)	DEFAULT TIER
Network Operator(Tier 1 / VNO)	5	Tier 1 Carrier, Pure Wholesale Carrier, Cable MSO Enterprise Division, International Backbone Specialist, Subsea cable operator	T1 (Subsea T2)
NeoCloud	5	Large Scale GPU, Sovereign AI Clouds, AI Infrastructure providers, Crypto to AI, Tier 1 Inference	T1 (Inference T2)
Data Center Colo Provider	4 + Greenfield	AI Signals - colo, Modular - colo, Hyperscale Wholesale - colo, Standard - colo, Greenfield (cross-segment)	T1 / Std T3 / GF T2
Fiber Operator	6	Tier 2 National Wholesale, Long Haul / Backbone, Dark Fiber Specialist, Regional CLEC, Regional Cable Operator, Municipal / Cooperative	T2-T4
MSP/Aggregator	5	Telecom Aggregator, Managed Network Services, Cloud + Telecom Hybrid MSP, TSD Technology Services Distributor, Master Agent	T2-T3
Enterprise-CustomerSegment	4	Financial Services, Healthcare Systems, Retail and Distribution, Outsourcing Services	T3

30 active sub-segments total. Plus "Greenfield" which pairs with EITHER Colo OR NeoCloud parent. **Other** = D1 disqualified (competitive / partner reference). **Flagged for deletion** = no positive ICP evidence (queued for cleanup).

02 HOW SIGNALS MOVE TIERS

The scoring + modifier model

Every detected signal is scored: **Tier (A=3, B=2, C=1) × Freshness × Confidence**. Scores produce a cascade band that drives rep DM treatment AND a tier modifier that adjusts the default tier (clamped to each sub-segment's ceiling / floor).

27+ HIGHEST Same-day rep attention. White-hot trigger.	18-26 STRONG This-week call. Time-bound buying window.	12-17 WORTH Worth-reviewing. Surface to rep.	8-11 LIGHT Exploratory. Surface in DM, no tier move.
--	--	--	--

TIER MODIFIERS (APPLIED IN ORDER)

MODIFIER	DELTA
Hot signal score 27-44 in last 60d	-1
White-hot signal ≥45 in last 60d	-2 (cap)
Stacked: 2+ signals ≥8 in same 30d	-1
Open deal past appointmentscheduled	-1
Stale signal >90d AND no rep activity ≤30d	+1
Sustained quiet >180d AND no activity ≤180d	+1

UNIVERSAL SIGNAL CLASSES (FIRE ACROSS ALL SEGMENTS)

CODE	CLASS
U1	Exec hire in network / infra / automation role
U2	M&A / PE roll-up (announcement OR close)
U3	New facility / market / site launch
U4	Earnings / 10-Q / 8-K language shift
U5	Conference speaking slot (context-only, never alone)
U6	Public outage / RCA / status-page incident

TWO SAFETY RAILS · Sub-segment ceiling / floor clamps the modifier (e.g. Standard-colo floor is T5, ceiling T1). `hs_is_target_account = true` freezes the tier number entirely while everything else still gets refreshed.

03 WHAT WE SCRAPE PER SEGMENT

Tier A meeting-ready signals by segment

These are the "buy-window-open" signals. Each segment has its own Tier A catalog plus Tier B (strong) and Tier C (context-only). Cross-segment Apollo (AP-1 to AP-7) and SEC 8-K (FR-1) layer on top.

Data Center Colo Provider**8 Tier A signals**

- Greenfield permit + utility interconnection (S2/S3)
- Site count 1 → 2 facility transition
- GPU cloud tenant anchor announcement
- Liquid cooling / D2C deployment
- Exec hire: VP/Director Interconnection, Network, Fabric
- Network engineering job-req surge
- Anchor tenant signing (hyperscaler / enterprise / neocloud)
- M&A / PE recap (announcement OR close)

NeoCloud**11 Tier A signals**

- Greenfield build S2/S3 (permit + utility + debt)
- Region count 1 → 2 transition
- NVIDIA NCP / DGX Cloud Lepton / Exemplar Cloud partner
- Enterprise customer win (non-hyperscaler)
- GPU-backed debt raise / credit facility
- Network / SRE / observability hiring spike
- Anchor tenant signing + colo lease SEC filing
- PeeringDB changes + IX member 100G/400G port adds
- MLPerf Inference / Training submission

Fiber Operator**9 Tier A signals**

- BEAD subgrant award (state broadband office)
- Regional fiber PE acquisition / roll-up
- AI data center lit or dark fiber win / RFP
- NaaS / automation / portal launch
- Exec hire: VP Network Automation / CNO / VP Wholesale
- Dark fiber IRU / long-haul sold-out announcement
- ABS / refinancing / CLO / secured debt issuance
- Consortium / federation / co-op announcement

Network Operator (T1 / VNO)**10 Tier A signals**

- Private-fabric copycat / multi-billion AI deal
- Earnings: NaaS / Network APIs / private fabric mentions
- Exec transition: CTO / CNO / VP Automation
- Wholesale / consumer divestiture or spin-off
- GitHub commits to CAMARA / Nephio / ONAP / OpenConfig
- TM Forum Autonomous Networks self-assessment
- SRv6 / Segment-Routing production rollout
- Public RFI/RFP for multi-domain orchestrator
- CTrO / CDO appointment

MSP / Aggregator**7 Tier A signals**

- PE acquisition / TSD roll-up
- Carrier dropped from line card
- New carrier added to portfolio
- "AI Practice" / "AI Solutions" launch (real, not blog-fluff)
- Exec hires: CRO / VP Solutions Eng / VP Product
- TSD platform / quoting-engine replatforming
- ScanSource / TDSYN earnings recurring-revenue disclosure

Enterprise (Multi-DC ICP)**7 Tier A signals**

- New DC build / expansion / major capacity add
- Definitive M&A agreement
- AI / GPU workload requiring enterprise GPU connectivity
- Exec hire: VP Network Infra / Director Network Eng
- Regulatory enforcement event / new framework date
- Equinix Fabric / Megaport customer win naming enterprise
- SOX 10-K disclosure of network / IT modernization

SOURCE RIGOR • Sources are tagged Robust / Medium / Aspirational. High-stakes signals (M&A, anchor tenant, BEAD, exec hire, GPU-debt) need **2 independent sources** to score at HIGH confidence; single-source events surface at MEDIUM with a "pending second confirmation" flag. Tier A freshness window is 60 days; Tier B decays steeper across 30-90 days.
