

Onward Reach from HUB787.

Turn every cable that lands at HUB787 into private reach across the Caribbean and LATAM, under HUB's brand, with no new build.

OVERVIEW

HUB787 is where the region's cable systems come ashore, and every carrier that lands wants the same next thing: reach across the Caribbean and LATAM from that point. Today each one assembles that reach itself. MaiaEdge lets HUB deliver it as a branded service, turned up in minutes across partner networks HUB never has to build.

- Branded onward reach across partner networks
- New revenue with no incremental build
- Full visibility and control, end to end

Minutes

to turn up onward reach, not weeks

One device

at HUB787 opens the region

Zero

incremental build to add reach

WHAT CARRIERS HIT TODAY

Reach stops at the building. Past the cross-connect, every carrier is on its own to get anywhere in the region.

Onward paths get stitched together by hand, partner by partner, over email and spreadsheets, in weeks.

No single view once traffic crosses a partner boundary, so SLA and control disappear at the edge.

THE MODEL

Put purpose-built carrier infrastructure at HUB787 and the onward path becomes a HUB service, branded and controlled by HUB, instead of something each customer assembles alone.

AT HUB787

One device

A single appliance at the interconnection boundary. Rack it once. Every onward path is provisioned from the cloud, with no routing protocols in the field.

ACROSS THE REGION

Federated reach

Partner networks across the Caribbean and LATAM run the same device. A carrier requests an endpoint and the path turns up in minutes, encrypted, visible hop by hop.

WHY IT MATTERS TO HUB

WHAT IT UNLOCKS

Every landing is worth more

WHAT IT MEANS FOR HUB

Onward reach ships alongside the cross-connect, so each cable system that lands has more reason to grow at HUB787.

New revenue, no new build

HUB monetizes reach across partner networks it never has to construct or own.

HUB keeps the customer

Paths run under HUB's brand and portal. HUB owns the relationship and the experience, start to finish.

Your hub bet, compounded

You made Puerto Rico the place cables land. This makes it the place the region connects through.

THE OPPORTUNITY

Make onward reach a HUB787 service.

The architecture maps directly onto the cable systems already landing at HUB787.
