

CAMPUS INTERCONNECTION & FIBER DISTRIBUTION CONCEPTUAL ARCHITECTURE

LEGEND

- East Path – A (Primary)
- East Path – B (Diverse)
- West Path – A (Primary)
- West Path – B (Diverse)

KEY NOTES

- All carrier and building entries are diverse (East & West).
- OSP to ISP transition occurs at MDF / EF in each facility.
- Distribution follows a hierarchical model:
MDF/ODF → End of Row → Top of Rack → Equipment.
- Dual A/B paths are maintained at every level for resiliency.
- Architecture supports carrier neutrality, scalability, and automated service provisioning.

DESIGN PRINCIPLES

Diversity
East / West

Redundancy
A / B Paths

Carrier
Neutrality

Scalability

Automation &
Service Agility

TERMINOLOGY

- Vault** – Outside Plant Access Point
- ZERO Vault** – Building Entry Point (Exterior)
- MDF / EF** – Main Distribution Frame / Entrance Facility
- ODF** – Optical Distribution Frame
- EOR** – End of Row Distribution
- ToR** – Top of Rack

SINGLE LINE FIBER DISTRIBUTION CONCEPTUAL ARCHITECTURE
