

1. Assumptions

Parameter	Value
Customer	Deep Infra
Data Center Locations	4
Redundancy	2× per location (active/active)
Total Units	8 (4 locations × 2 per site)
Connection Speed	10 Gbps per unit
Contract Term	36 months
MaiaEdge SKU	ME-PBC-PCE-10G-36M (PBC + PCE + Optics)
MaiaEdge Discount	30%
MaiaEdge Billing	Monthly invoicing with 36-month term commitment
Utilization-Based Fabric	\$1,000/month per port — bundled port + connectivity
Fabric Term Discount	10% (standard 36-month commitment)

2. Cost Comparison — 4 Locations, Redundant (2× per Site), 36-Month Term

Metric	MaiaEdge PBC (30% Discount)	Utilization-Based Fabric (Bundled)
Deployment	4 locations × 2 PBCs	4 locations × 2 ports
Total Units	8	8
List Price per Unit (Annual)	\$11,656	\$12,000
Term Discount	30%	10% (36-mo commitment)

Discounted Unit Price (Annual)	\$8,159	\$10,800
Discounted Annual Total	\$65,274	\$86,400
Monthly Payment	\$5,439.50	\$7,200
3-Year TCV	\$195,822	\$259,200
MaiaEdge Savings (Annual)		\$21,126
MaiaEdge Savings (Monthly)		\$1,760.50
MaiaEdge Savings (3-Year)		\$63,378
MaiaEdge Savings (%)		24.5%

3. Head-to-Head Feature Comparison

Metric	MaiaEdge PBC	Utilization-Based Fabric (Bundled)
Delivery Model	Dedicated HW (IaaS)	Shared / multi-tenant
Hardware Included	✓ PBC + Optics included	✗ Port access only
Path Computation Engine	✓ Traffic Engineering / PCE	✗ Not available
Traffic Engineering	✓ Deterministic path control	✗ Best-effort forwarding
Redundancy Model	✓ Dual PBC per site, active/active	Dual port per site
End-to-End Path Visibility	✓ Full telemetry, all hops	Port-level metrics only
Marketplace — Federated Private Ethernet Paths	✓ Connect to any MaiaEdge customer globally with end-to-end visibility	✗ Limited to fabric footprint
Billing Model	Monthly billing, 36-mo term commitment	Monthly billing, 36-mo term commitment
Upfront Capital Outlay	✓ None — monthly OpEx	✓ None — monthly OpEx
Early Termination	Remaining contract balance	100% ETF on remaining term
Connectivity Bundling	All-inclusive (HW + SW + optics)	Port + VXC bundled at \$1,000/mo
Scalability	Per-node, any location	Limited to fabric PoPs

4. Key Talking Points

- **Cost Savings:** Across 4 data center locations with full redundancy (2 units per site), MaiaEdge delivers \$63,378 in savings over 3 years (24.5%) compared to the utilization-based fabric's bundled offering. On a monthly basis, Deep Infra saves \$1,760.50 per month.
- **Monthly Billing, No Capital Outlay:** Both MaiaEdge and the fabric offer monthly billing with a 36-month term commitment. Deep Infra pays \$5,439.50/month with MaiaEdge versus \$7,200/month with the fabric — a predictable OpEx model with no upfront capital requirement.
- **All-Inclusive Pricing:** MaiaEdge's \$5,439.50/month includes 8 dedicated PBCs with interface optics and the Path Computation Engine — fully redundant across all 4 locations. The fabric's \$7,200/month still relies on shared multi-tenant infrastructure with no dedicated hardware or traffic engineering.
- **Built-In Redundancy:** Deep Infra's deployment includes dual PBCs at each of the 4 data center locations, providing active/active redundancy with no single point of failure. Each PBC operates independently with its own PCE and telemetry.
- **Traffic Engineering:** MaiaEdge provides a full Path Computation Engine (PCE) for deterministic path control with traffic engineering. The fabric offers best-effort forwarding with no TE capabilities.
- **Marketplace — Federated Private Ethernet Paths:** Deep Infra gains access to the MaiaEdge Marketplace, enabling on-demand, policy-controlled private Ethernet connections to any other MaiaEdge customer globally — with full end-to-end visibility across every hop. This is a capability the utilization-based fabric cannot replicate.
- **End-to-End Visibility:** MaiaEdge provides full telemetry across all network hops, compared to port-level metrics only with the fabric solution.
- **Pricing Caveat:** Fabric pricing is based on published bundled rates of \$1,000/month per port. Actual pricing may vary by geography and negotiated terms. Recommend requesting a formal quote from the fabric provider for Deep Infra's specific locations before using this analysis externally.
